1. Features

1-1 Scope of application: These specifications apply to the surface mount switch, LS71C4D1-T.

1-2 Shape and dimensions: As per the outline drawing.

1-3 Appearance : Any defects that affect performances are not allowed.

1-4 Temperature range for use : $\quad-30 \sim+85{ }^{\circ} \mathrm{C} \quad$ (Switch must keep ON-OFF function.)

1-5 Temperature range for storage : $-40 \sim+85{ }^{\circ} \mathrm{C}$

1-6 Tests and measuring conditions :
Tests and measurements are performed under the standard conditions, unless specified otherwise.

| Normal temperature | 20 | $\pm$ | 15 |
| :---: | :---: | :---: | :---: |
| Normal humidity | 65 | $\pm$ | 20 |
| Normal pressure | 86 | $\sim$ | 106 |

1-7 Parts code:

2. Rating

Maximum rating

4. Durability test

4-1 Details of the tests

| No. | Item | Test conditions |
| :---: | :---: | :---: |
| 1 | Operating life | 1) $\mathrm{DC} \quad \underline{12} \mathrm{~V}, \underline{5} \mathrm{~mA}$ resistance load <br> 2) Test speed : $\quad \underline{2}$ times/second <br> 3) Test force : 3.1 N <br> 4) Number of times of the test : $100 \quad \mathrm{k}$ times <br> 5) Force load : Coil spring |
| 2 | Heat resistance | After exposure to the ambient condition of $\quad \underline{85} \quad \pm \quad \underline{2}{ }^{\circ} \mathrm{C}$ for $\quad \underline{96}$ hours, expose test pieces for one hour in normal temperature and humidity and measure at standard condition. |
| 3 | Cold resistance | After exposure to the ambient condition of $\quad \underline{-40} \quad \pm \quad \underline{2} \quad{ }^{\circ} \mathrm{C}$ for $\underline{96}$  <br> hours, expose test pieces for one hour in normal temperature and humidity and   <br> measure at standard condition. Water droplets should be removed.   |
| 4 | Humidity <br> resistance | After exposure to the ambient condition of  $\underline{60}$ $\pm$ $\underline{2} \quad{ }^{\circ} \mathrm{C}$ and <br> relative humidity of $\underline{90 \sim 95}$ $\%$ for $\underline{96}$ hours, expose test pieces for one hour in normal temperature and humidity and measure at standard condition. Water droplets should be removed. |
| 5 | Temperature cycle | A |
| 6 | Vibration resistance | Total amplitude of $\quad \underline{1.5} \mathrm{~mm}$. Vibration frequency of $\underline{10}$ to $\underline{55} \mathrm{~Hz}$. In case of sweep, Vibrating directions: $\mathrm{X}, \mathrm{Y}$ and Z . Test hours: $\underline{2}$ hours for each direction, total 6 hours. |
| 7 | Shock resistance | Shock acceleration $\underline{30} \quad$ G. Shock directions $\mathrm{X}, \mathrm{Y}$ and Z.  <br> Shock are applied $\quad \underline{3} \quad$ times for each 3 directions, total $\quad \underline{9}$ times.   |
| 8 | Stopper intensity | Apply static force of $30 \quad \mathrm{~N}$ vertically to the center of operating part for <br> 15 seconds. |
| 9 | Withstand voltage | Apply AC $\underline{250} \mathrm{~V}(50 \mathrm{~Hz}$ or 60 Hz$)$ for $\underline{1}$ minute. |

| $\triangle$ |  |  |  |  | Product name | TACTILE SWITCH |

| $\triangle$ |  |  |  |  | Drawing No. |  |
| Mark | QTY | Date | Change | Name | Special note |  |

4-2 Failure judgment criteria

| No. | Judgment item | Measurement condition | Failure judgment criteria |  |
| :---: | :---: | :---: | :---: | :--- |
| 1 | Operating force | Refer to 3-1. Measuring conditions | $\underline{ \pm 30}$ | \% or more of initial value. |
| 2 | Contact resistance | Refer to 3-2. Measuring conditions | $\underline{10}$ | $\Omega$ or more |
| 3 | Insurance resistance | Refer to 3-2. Measuring conditions | $\underline{10}$ | $\mathrm{M} \Omega$ or less |
| 4 | Bounce | Refer to 3-2. Measuring conditions | $\underline{30}$ | ms. or more when both ON and OFF. |

5. Recommended soldering conditions

5-1 Reflow soldering
(1) Temperatures of both pre-heating and main heating of the reflow furnace are to be set in accordance with the following temperature profile.
(2) Maximum reflow number of times allowed: 2 times 2nd reflow should be conducted after the switch has cooled to normal temperature.
(3) For improving solder wetness, it is recommended to plate the surface of PCB pattern with Au.
(4) Recommended solder paste: S70G Type 5 from Senju Metal Industrial Co., Ltd. or similar. If you use paste other than our recommendation, please verify it carefully before use.
(5) Conditions can change for each reflow furnace, therefore sufficient verification prior to production is required.
(6) As for PCB pattern and opening shape of the metal mask, refer to Page 7.
(7) The standoff amount of SW after soldering should be controlled to be less than 50um.

## 5-2 Manual soldering

(1) Use a soldering iron of 20 W or less and keep the temperature of the tip to less than $350^{\circ} \mathrm{C}$, and use only one time for less than 3 seconds.
(2) Pay attention to the soldering iron so that it does not touch product directly when handling.
(3) After soldering, care must be taken not to handle the switch until its temperature cools and returns to normal temperature.

| $\triangle$ |  |  |  |  | Drawing No. |  |
| Mark | QTY | Date | Change | Name | Special note |  |

6. Packing specifications

## REFERENCE

6-1. Moisture proof-packing
Switches are packed in an aluminum envelope to retain the initial product quality.
Packed quantity: $\quad \underline{2}$ reels/bag
(Depending on the shipped quantity, 1 reel is in a bag.)

6-2. Taping specification (In accordance with JIS C 0806-3)
Packed quantity: 4,000 pcs./reel

6-3. Tape dimensions

| $\triangle$ |  |  |  |  | Product name | TACTILE SWITCH |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\triangle$ |  |  |  |  | Name | LS71C4D1 |
| $\triangle$ |  |  |  |  | Drawing No. |  |
| Mark | QTY | Date |  |  |  |  |

7. Recommendation for design (Unit:mm)

7-1. Recommended tip shape of the key cap

Design the key cap referring to the recommended shape in the right drawing.

7-2. Recommended operating condition: Offset

Design the offset amount between the center of operating part and that of key cap as 0.4 mm Max.

7-3. Recommended operating condition: Tilt

Design the tilt of key cap
to be within $90 \pm 2^{\circ}$

7-4.Recommended operating condition: Material

Select hard resin as the key cap material.
Soft material such as rubber is not recommended because it can impact on the characteristics.

Notes:
This section is for operation guarantee and not for characteristics guarantee (Section 3).

| Mark | QTY | Date | Change | Name | Special note |  |

8. Outline dimensional drawing

## Bottom view

Side view

Unit: mm
Tolerance: $\pm 0.2$

## Notes:

(1) Please design dimensions of metal mask for solder printing in the same dimensions as outline of soldering pattern.
0.1 mm thickness of metal mask is recommended.
(2) Please measure the height of the switch with a dial gauge. (Initial force: 30gf)

## 10. Precautions

(1) This switch is not applicable for use in automobiles.

If you intend to use the switch for automobiles, please notify us before use for sure.
Do not use this switch in the equipment which requires high level safety and reliability, such as aviation apparatus, medical equipment etc.
(2) If a short circuit is anticipated between the terminals due to high temperature high humidity, condensation or water droplets, please apply coating on the surface of solder.
(3) Storage period of product

Before opening the moisture proof bag: Within 6 months after shipped from us and stored under normal temperature and humidity. After opening the bag, store products under normal temperature and normal humidity conditions and use them soon.
Store the switch in the place where the sunlight does not shine on and corrosive gus does not generate.
(4) Do not use a switch so that stress is applied from the side to the plunger or actuator of the switch. It can cause damage or peeling off.
(5) Care must be taken to ensure that a force bigger than the specified value by the stopper intensity is not applied to the switch operating part. Physical stress should not be applied to the main body of switch other than the operating part.
(6) Do not apply a shock to the switch.

If a shock is inevitable as a result of the structure used, it is recommended to build a stopper function and so on.
(7) Warpage of the mounting PCB/FPC or PCB/FPC support can affect the performance and/or reliability of the switch. Pay attention to the impact of warpage when designing.
(8) This switch was designed under the assumption that it would not remain pressed for a long time. If you intend to use the switch in such a way, contact us before use.
(9) If you intend to wash the switch with solvent after SMT soldering or manual soldering, contact us in advance.
(10) When a switch is used for a set which requires critical safety, verify the influence brought by the failure of the switch itself in advance and secure the safety by preparing solutions such as a protective circuit, protective device or fail-safe design, etc.
(11) Do not use the switch in the process or with the method under the environment that the swtich is exposed to the pressure exceeding the range specified in item 1-6. It can affect the characteristics or reliability of the switch.
(12) If shipment is started three months after the specifications are issued, we regard the specifications as approved by customer, even if the specifications with his approval signature are not returned to us.
