

Weller Fume Extraction Solutions

Filtration is only as good as its Filter

New Zero Smog 4V Filterset:

Order No. **FT91000042**

Freshen up your workspace with fresh Weller filters. The filters are the most critical part of the fume extraction units when it comes to the health of operators breathing workplace air. The HEPA particle filter and the granular gas filters are combined in such a way that they are replaced together as a main filter unit. With use, the HEPA clogs up and the gas media gets saturated and oxidised. The fine dust filter (pre-filter mat) is the preliminary stage of the filtration and is typically replaced as often as every month depending on the application. This filterset is a convenient way of replacing main filters prefilters in an optimal proportion.

Main Filter Features

- > HEPA class H13 particle filter
- > Wide-band Granular gas adsorption media consisting of 50% Active Carbon, 50% Potassium Permanganate (KMnO4)

Pre Filter Features

- > High level absorption from F7 Class filter mat

*33% off orders of 3 or more sets otherwise 11% off.

Validity period of introductory price: July to December 2022
