OPERATION

Operating Instructions

Place the connector sub-assembly in the nest of the tool and position it under the wire insertion punch.

Position the wire to be inserted before the hole in the slot that the wire insertion punch slides in.

FCI Electronics Issued: Date (01/22/99)

PDM: Rev:C STATUS:Released

If the wire is to be inserted and not solder push the wire gently to the bottom of the hole. If the wire is to be soldered, advance the wire into the hole just until the wire insulation barely enters the hole.

Squeeze the pliers' handles until the top detail hits the top of the bottom detail. This inserts the wire.
