

## Statement of REACH-209 Compliance

27 August 2020

This statement is confirmation that IQD Frequency Products Ltd are aware of the European Union REACH (Registration, Evaluation and Authorisation [and restriction] of Chemicals) regulation which entered into force on the 1<sup>ST</sup> June 2007.

IQD are also aware of the expansion of the REACH Substances of Very High Concern (SVHC) list to 209 substances on 25<sup>th</sup> June 2020.

IQD products are articles defined under REACH as, '...an object which during production is given a special shape, surface or design which determines its function to a greater degree than does its chemical composition..' (Article 3(3)) and does not release substances under their normal use.

Suppliers of articles must provide recipients with information on SVHCs if those are present above the concentration limit of 0.1% on an article level. IQD's products do not generally contain any of the currently listed SVHC's above this concentration limit, except in some cases where the following models may contain >0.1% of total weight of the following SVHC's;

Model	SVHC Substance
85SMX	Lead (Pb) CAS: 7539-92-1
CFPT-123	Methylhexahydrophthalic Anhydride (C <sub>18</sub> H <sub>24</sub> O <sub>6</sub> ) CAS: 25550-51-0

## Statement on Diboron Trioxide CAS: 1303-86-2

Some of our products contain Diboron Trioxide in the glass frit part of the device. When Diboron Trioxide becomes a solid solution it forms a multi-component substance (UVCB – substance of unknown or variable composition, complex reaction products) such as glass. In general, UVCB substances do not have a corresponding CAS number. Therefore, we show Diboron Trioxide as CAS: 1303-86-2, which multi-component substances are made from.

It is difficult to assign a CAS number to a UVCB substance like glass, which assumes no amorphous state with no identifiable crystal-like system and ceramics which do not always have the ingredients in proportions. In general, UVCB substances like glass/ceramics cannot be identified with a specific CAS number. Instead it has been established practice to express the constituent substances as oxides (diboron trioxide (B<sub>2</sub>O<sub>2</sub>), for example) and then describe the final UVCB as a mixture of such oxides. We consider it important to note that the oxides themselves are not included in a UVCB, although UVCB is identified with the oxides.

Under the REACH Regulation, as glass is considered a UVCB substance, it is exempted from the REACH Regulation Annex V (11), 'Obligation to Register'.
