

Swanstrom Tools for Electronics

**Swanstrom
Tools USA**

Swanstrom Tools USA

OUR MISSION

To profit with our partners by increasing productivity with precision quality ergonomic tools.

OUR PROMISE

We promise our customers simply the finest, most ergonomic and durable tools for their industrial requirements, and to serve them accurately, on time, and with the highest ethical standards.

OUR QUALITY AND ERGONOMICS

Our specialties are long life, user friendly tools, for high tech industries and people who use tools intensely . Swanstrom Tools soon prove themselves to operators, engineers, ergonomists, buyers and distributors.

Strength and long life starts in our steel. Smoother bearings, sharper blades, beautiful ergo black finishes and

Feature

Super cutters ar e forged out of high chromium, high carbon, 52100 grade ball bearing steel.

Swanstr om pioneered ergonomic handles for the electronic hand tool industry .

All Swanstrom Super, Spartan, and STUSA forged tools are manufactured in the USA.

Ergonomic handle designs combined with many choices of edges and bevels.

Super cutters have induction hardened (HRC65) cutting edges.

Factory reconditioning of all Super Tools and many competitors tools with fast turn-around time.

Scrivet joints ™.

Specialty tool design and manufacture.

Super Tools feature adjustable leaf springs and option of positive adjustable stops.

Multiple spring options available for Super Tools.

All Swanstr om Super T ools ar e ESD safe.

We offer leadcatchers.

Soft Touch ™ handles set our tools apart from the competition. Precision shaping, honing and other finishes conform exactly to each user's unique requirements.

Factory use proves our long edge and bearing life. Comfort of our ESD safe textured foam is immediately obvious and best for users' product quality and people, thereby reducing their tool costs, workers comp costs, and total costs.

OUR WARRANTY

We warrant these products free of defects in material or workmanship for a tool lifetime of normal use, often many years. Any product failing to satisfy the customer should be reported to our Sales Manager, who will quickly get the customer satisfied while directing the complaints, tools, and questions to quality manager for thorough analysis.

If inspection shows that the product failed to meet new tool specifications, we will repair, replace, or credit (our option). Abused or alter ed tools are not covered.

Benefit

Best steel for combined durability (wear) and reliability (life).

Ergonomic handles reduce the probability of CTD's.

American jobs for American workers.

Provides ease of operator use.

Long life, more cuts.

Facilitates ISO 14000 compliance. Extends life of tool. Reduces cost per cut.

Allows for easy readjustment of joint.

Tools for unique applications.

Provides flexibility for the operator.

Leaf springs - adjustable.
Coil springs - field replaceable.

Appropriate for bench use in static sensitive ar eas.

Prevents cut wir e from falling into components.

Ergonomic Considerations

Ergonomic tools allow people to work safely and cost effectively. Tools should be selected based on the operator and task to be performed.

Size, weight and handle form and opening should be comfortable to the employee. Generally, smaller sized tools are more comfortable for smaller hands and larger tools are more effective with larger hands.

Swanstrom electronic tools are available in sizes 3 to 7 dependent upon tool type.

Handles

- Traditional Shorts for less repetitive work areas with restricted access. A traditional style handle can also be an operator's preference. Typical width: 2.0"

- Double Ergonomic (E) disperse and minimize pressure. Extended handle lengths are available. Typical width: Sizes 4 & 5: 1.75"; Size 6-1.95"; Size 7-2.13"

- Pistol Grip (EPR or EPL) are excellent for highly repetitive tasks. They help maintain normal wrist alignment, reducing potential for carpal tunnel and disperse pressure on the hand; Pistol grips further reduce strain and fatigue by allowing all four fingers to be used.

Handle Features

- Handle diameter distributes the pressure over a larger hand surface and eases pick up
- Double action leaf springs a soft touch and adjustable, minimizing the force and pressure on the hand.
- Static Dissipative Soft Touch™ foam handles distribute hand pressure evenly while protecting sensitive components from electro-static discharge.

Spring Choices Include:

- Double adjustable leaf
- Coils

All Handles are ESD Safe
(Static Dissipative)

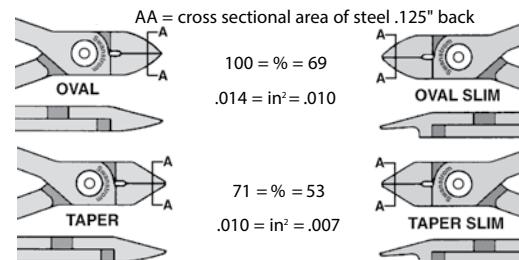

Head, Tip, and Edge Options

The many tool heads, angles and tip shapes, and edges allow tool choices based on arm and hand position to maximize visibility, ergonomics, and economics. Generally a tool with a larger head lasts longer.

Tip Shape

Oval - the most durable

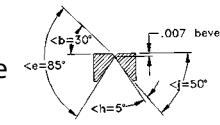

- Oval Slim - for getting into smaller spaces
- Taper - also for getting into very small spaces
- Taper Slim - most versatile but weaker tips

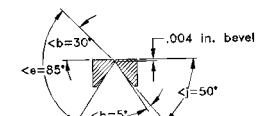

- Angle end and curved nose cutters - the most task specific.
- Leverage and Tip Control - operator effort minimized by using the shortest jaw length possible for the task.

Edge Type

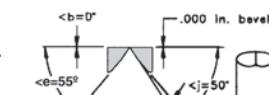

- Bevel - cuts where pinch or spike is not critical, longest life, most pressure to cut

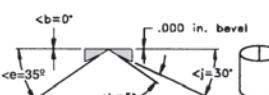

- Flush - reduces pinch, spike and squeeze pressure

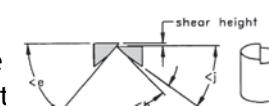

- Super Flush - produces minimal spike and shock transmittal, more ergonomic, less squeeze

- Super Flush, Super Sharp - produces least spike, most ergonomic and easiest to squeeze

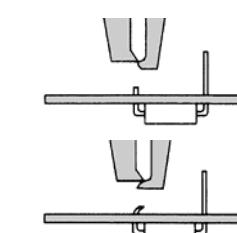

- Near Shear - leaves a slight deformation and step left on the cut, reduces force required to cut

- Pure Shear - no spike, small side deformation, easiest cut

- Stand-Off Shear - minimizes shock, leaves no spike and produces consistent "stand off" lead lengths

- Stand-Off Bend/Cut

Tool Life Expectancy

Tool attributes that give Swanstroms longest life:

- High chrome, high carbon alloy steel for bearings and edges. Aircraft grade bearing quality E52100 steel hardenable to HRC 65 and subsequently tempered.
- Edge angles for ease of cut and edge life (10 choices).
- Longer handles for leverage and pressure distribution.
- Wider bodies for better bearing properties and strength.
- Very hard cut edges for edge life (HRC 65, tempered).
- Scrivets™ for lubricity, adjustability, cleanliness.
- Stainless adjustable leaf springs welded in place.

Tools are scientifically inspected and tested at key production stages. Touch tests are performed on tool edges, tip, joints and springs to ensure ideal function.

Many years of lab and field testing prove that Swanstrom cutters used within design limits, give well over 1,000,000 clean cuts on common lead material such as .020 tinned copper

Tool Maintenance:

For better tool life, perform proper easy local maintenance.

- Oil joints regularly. An occasional single drop is wise.
- Oil joint and Scrivet™ before adjustment.
- Protect spring-to-handle weld if adjusting leaf spring.
- Cut only material the tool is designed to cut.
- Use proper size tools for parts being cut. Use larger tools for larger and harder parts.
- Keep tools with stops adjusted for type of material cut.
- Keep tools sharp and well serviced. Use Swanstrom Tool Service. (allbrands)

Don'ts:

- Don't force a tight, stiff joint. (oil it)
- Don't cut material for which tool was not designed.
- Don't pull on springs without protecting the weld under the plastic (rotate-bend for more pressure).
- Don't improperly grind. Heat and the wrong touch will quickly damage tool beyond repair, may soften the edges, and void warranty
- Don't forget Swanstrom Tool Service. 1-800-287-8872

All Serviced Tools Are Returned ESD Safe
(Static Dissipative)
