SOLDERING CONDITIONS

Recommended reflow soldering profile

Recommended Pb-free reflow soldering profile

Notes:

- Repairing should not be done after the LEDs have been soldered. When repairing is unavoidable, a double head soldering iron should be used. It should be confirmed beforehand whether the characteristic of the LEDs will or will not be damaged by repairing.
- 2. Reflow soldering should not be done more than two times.
- 3. When soldering, do not put stress on the LEDs during heating.
- 4. After soldering, do not warp the circuit board.

MOISTURE SENSITIVITY

AOP's SMD LED are shipped in sealed, moisture-barrier bags (MBB), designed for long shelf life. If SMD LED is exposed with moist environments before soldering, this may cause damage to SMD LED during soldering (reflow operation).

Storage/Floor time

Condition	Temperature(C)	Humidity(RH)	Period of Time
Before Open	30	60	6 month from shipping date
After Open	30	60	Within 48 hours

1. MSL of this product are MSL4, please see IPC/JEDEC STD020D for more detail.

2. LEDs reach floor time may be damaged while soldering/reflow processing, please discard the LED.

3. If RH indicator show 60% RH when package is unsealed, please bake/discard the LED.

RESEAL

- 1. AOP's aluminum MBB may reuse as to reseal the unused LED if MBB has not damaged or has any holes in it.
- 2. Moisture absorbent material (Silica gel) may reuse if it does not become pink.
- 3. Proper resealed LED's floor time will NOT RESET, only stop counting until open
- 4. If RH indicator card show 60% RH when open the package, please bake/discard the package.
