Controller Information

Built-in PIC16F690 controller.

Please download specification at http://www.newhavendisplay.com/app_notes/PIC16F690.pdf

Communication Information

This display uses a built-in PIC16F690 for serial communication.

100mS delay is required upon power-up for the built-in PIC to initialize the display controller.

I²C protocol:

To enter the I²C mode, place a jumper on R1.

SDA and SCL have pull-up resistors (10K Ohm) on R7 and R8.

The default I²C address is 80 (50 hex) when counting the R/W bit, and 40 (28 hex) if not. The I²C address can be changed to any 8-bit value by command function, with the exception that the LSB (least significant bit) must always be '0'. Once the I²C address has been changed, it will be saved in the system memory, and it will revert back to the default address if either RS-232 or SPI protocol is selected.

The I²C interface can receive data at up to 50KHz clock rate.

SPI protocol:

To enter the SPI mode, place a jumper on R2.

SPI mode has a normally high idle clock. When Slave Select is LOW, data is sampled on the rising edge of the Clock.

The SPI interface can receive data at up to 100KHz clock rate.

SPI Mode 3

CPOL = 1

CPHA = 1

RS-232 (TTL) protocol:

To enter the RS-232 mode, both R1 and R2 should be open.

The RS-232 signal must be 5V TTL compatible. Communication format is 8-bit data, 1 Stop bit, no parity, no handshaking. Default BAUD rate is 9600 and is changeable with a command function. Once the BAUD rate has been changed, it will be saved in the system memory, and it will revert to the default address if either I²C or SPI protocol is selected.

Self-Test Mode

To enter self-test mode, both R1 and R2 should be populated with a 0Ω resistor.

In self-test mode the backlight will be turned on and set to high, the contrast will be set to nominal value. Then the display returns the following screens:

Screen 1:

- Newhaven Display

Screen 2:

- Firmware Version 3.0

Screen 3:

- Default baud rate: 9600
- Default I²C Slave Address: 0x50

ASCII Text

To display normal text, just enter its **ASCII** number. A number from **0x00 to 0x07** displays the user defined custom character, **0x20 to 0x7F** displays the standard set of characters, **0xA0 to 0xFD** display characters and symbols that are factory-masked on the ST7066U controller. 0xFE is reserved.
