

MICROCHIP

IC/Module Certificate of Proposition 65 Compliance

November 14, 2022

California's Proposition 65

California's Proposition 65, the California Safe Drinking Water and Toxic Enforcement Act of 1986, entitles California consumers to special warnings for products that contain chemicals known to the state of California to cause cancer and birth defects or other reproductive harm if those products expose consumers to such chemicals above certain threshold levels through normal, foreseeable use of the products.

This document certifies that, to the best of current knowledge and belief and under normal usage, Microchip's IC semiconductor and module products are in compliance with California Proposition 65. Although some of our products may contain chemicals identified on the California Proposition 65 Chemical List, there is no risk of exposure, such as through skin contact, through ingestion with food/drink, or through inhalation during normal usage. Microchip's IC semiconductor and module products do not expose product consumers to any Proposition 65 listed Chemical above a No Significant Risk Level (NSRL) for cancer-causing chemicals and do not expose product consumers to any Proposition 65 listed Chemical above a Maximum Allowable Dose Level (MADL) for chemicals causing reproductive toxicity. Therefore, a warning label that our products can expose consumers to chemicals known to the State of California to cause cancer, birth defects, or reproductive harm is not warranted.

Please note that for people or companies intending to use Microchip products outside of normal, intended usage, such as through destructive decomposition, there may be a potential risk for exposure to Proposition 65 chemicals if contained in the product. To reduce risk of exposure, work with approved safety equipment in a well-ventilated area, wear dust masks that are specially designed to filter out microscopic particles, wear protective gloves and wash hands after handling.
