

THERMA SHIELD®**EXTREME
TEMPERATURE**

Reflective Aluminized Surface Bonded To Insulating Fiberglass In 4 Styles

THERMA SHIELD®**TUBE****THERMA SHIELD®****CONVOLUTED**

ThermaShield® creates a thermal buffer between your wires, hoses and cables, and the high temperature environments surrounding them.

ThermaShield® is engineered by laminating an aluminized metallic heat shield to a layer of strong, tightly braided fiberglass insulation. This system provides superior protection from radiant heat by reflecting it away from sensitive electronics, wiring, and hoses.

The four styles of ThermaShield®: Tube, Convoluted, Wrap, and Flat provide a full range of solutions for virtually any application. The Wrap and Flat products use a very aggressive, high temperature adhesive that eliminates the need for high-temp mylar tape or other adhesive.

ThermaShield® products will endure temperatures up to 1,200°F without delaminating, turning brittle, or suffering adhesive failure.

They are ideal in any situation where protection from radiant heat is a primary concern.

ThermaShield® helps keep high performance engines running efficiently.

Techflex® ThermaShield® and a competitor's similar product were placed in the same electrical test oven for one hour at 626°F (330°C). Note the burning and delamination of the fiberglass interior of the Brand "X" product. Even the metallic shroud suffered a degree of burning and brittleness that did not occur on the ThermaShield® sample.
