

NCP5603

High Efficiency Charge Pump Converter / White LED Driver

The NCP5603 is an integrated circuit dedicated to the medium power White LED applications. The power conversion is achieved by means of a charge pump structure, using two external ceramic capacitors, making the system extremely tiny. The device supplies a constant voltage to the load from a low battery voltage source. It is particularly suited for the High Efficiency LED used in low cost, low power applications, with high extended battery life.

Features

- Wide Battery Supply Voltage Range: $2.7 < V_{CC} < 5.5$ V
- Automatic Operating Mode 1X, 1.5X and 2X Improves Efficiency
- Dimmable Output Current
- Up to 350 mA Output Pulsed Current
- Selectable Output Voltage
- High Efficiency Up To 90%
- Supports 2.5 kV ESD, Human Body Model
- Supports 200 V Machine Model ESD
- Low 40 mA Short Circuit Current
- Pb-Free Package is Available

Applications

- High Power LED
- Back Light Display
- High Power Flash

PIN FUNCTION DESCRIPTION

Pin	Symbol	Type	Description
1	V _{out}	OUTPUT, PWR	This pin supplies the regulated voltage to the external LED. Since high current transients are present in this pin, care must be observed to avoid voltage spikes in the system. Good high frequency layout technique must be observed.
2	C1N	POWER	One side of the external charge pump capacitor (C _{FLY}) is connected to this pin, associated with C1P, pin 9. Using low ESR ceramic capacitor is recommended to optimize the Charge Pump efficiency.
3	V _{bat}	POWER	This pin shall be connected to the power source, and must be decoupled to Ground by a low ESR capacitor (2.2 μ F/6.3 V ceramic or better (see Note 1)).
4	Fsel	INPUT, Digital	This pin is used to program the operating frequency: Fsel = 0 \rightarrow Fop = 262 kHz Fsel = 1 \rightarrow Fop = 650 kHz
5	Vsel	INPUT, Digital	This pin setup the output voltage: Vsel = 0 \rightarrow V _{out} = 4.5 V Vsel = 1 \rightarrow V _{out} = 5.0 V
6	EN/PWM	INPUT, Digital	This pin controls the activity of the NCP5603 chip: EN/PWM = Low \rightarrow the chip is deactivated, the load is disconnected EN/PWM = High \rightarrow the chip is activated and the load is connected to the regulated output current. The NCP5603 can operate either in a continuous mode (EN/PWM = High), or can be controlled by a PWM pulse applied to EN/PWM to dim the output light. When EN/PWM is Low, the external load is disconnected from the converter, providing a very low standby current. The pull down built-in resistance makes sure the chip is deactivated even if the EN/PWM pin is disconnected (see Note 2).
7	C2N	POWER	One side of the external charge pump capacitor (C _{FLY}) is connected to this pin, associated with C2P, pin 10. Using low ESR ceramic capacitor is recommended to optimize the Charge Pump efficiency.
8	GND	GROUND	This pin combines the Signal ground and the Power ground and must be connected to the system ground. Using good quality ground plane is mandatory to avoid spikes on the logic signal lines.
9	C1P	POWER	One side of the external charge pump capacitor (C _{FLY}) is connected to this pin, associated with C1N, pin 2. Using low ESR ceramic capacitor is recommended to optimize the Charge Pump efficiency.
10	C2P	POWER	One side of the external charge pump capacitor is connected to this pin, associated with C2N, pin 7. Using low ESR ceramic capacitor is recommended to optimize the Charge Pump efficiency.

1. Using ceramic 16 V working voltage capacitors is recommended to compensate the DC bias effect encountered with such type of capacitors.
2. Any external impedance connected to pin 6 shall be 10 k Ω or higher.

NCP5603

MAXIMUM RATINGS

Rating	Symbol	Value	Unit
Power Supply Voltage	V_{bat}	7.0	V
Power Supply Current	I_{bat}	800	mA
Digital Input Pins	V_{in}	$-0.5\text{ V} < V_{bat} < V_{bat} + 0.5\text{ V} < 6.0\text{ V}$	V
Digital Input Pins	I_{in}	± 5.0	mA
Output Voltage	V_{out}	5.5	V
ESD Capability (Note 3) Human Body Model Machine Model	V_{ESD}	2.5 200	kV V
DFN10, 3x3 Package Power Dissipation @ $T_{amb} = +85^{\circ}\text{C}$ Thermal Resistance, Junction-to-Air ($R_{\theta JA}$)	P_{DS} $R_{\theta JA}$	580 68.5	mW $^{\circ}\text{C/W}$
Operating Ambient Temperature Range	T_A	-40 to +85	$^{\circ}\text{C}$
Operating Junction Temperature Range	T_J	-40 to +125	$^{\circ}\text{C}$
Maximum Junction Temperature	T_{Jmax}	+150	$^{\circ}\text{C}$
Storage Temperature Range	T_{stg}	-65 to +150	$^{\circ}\text{C}$
Latchup Current Maximum Rating		100 mA per JEDEC standard, JESD78	
Moisture Sensitivity Level (MSL)		1 per IPC/JEDEC standard, J-STD-020A	

Stresses exceeding Maximum Ratings may damage the device. Maximum Ratings are stress ratings only. Functional operation above the Recommended Operating Conditions is not implied. Extended exposure to stresses above the Recommended Operating Conditions may affect device reliability.

- This device series contains ESD protection and exceeds the following tests:
Human Body Model (HBM) $\pm 2.5\text{ kV}$ per JEDEC Standard: JESD22-A114
Machine Model (MM) $\pm 200\text{ V}$ per JEDEC Standard: JESD22-A115.
- The maximum package power dissipation limit must not be exceeded.

Output Power Efficiency @ V _{bat} = 3.3 V, V _{out} = 5.0 V, I _{out} = 60 mA, Fop = 262 kHz @ V _{bat} = 3.9 V, V _{out} = 5.0 V, I _{out} = 160 mA, Fop = 650 kHz		P _η	-	75 84	-	%
Thermal Shut Down Protection Hysteresis		T _{HSD}	-	160 20	-	°C

5. Temperature range guaranteed by design, not production tested.
6. Smaller footprint associated to lower working voltages (10 V or 6.3 V, size 0805 or 0602) can be used, but care must be observed to prevent DC bias effect on the capacitance final value. See capacitor manufacturer data sheets.
7. Ceramic X7R, ESR < 100 mΩ, SMD type capacitors are mandatory to achieve the I_{out} specifications. Depending upon the PCB layout, it might be necessary to use two 2.2 μF/6.3 V/ceramic capacitors in parallel, yielding an improved V_{out} noise over the temperature range. On the other hand, care must be observed to take into account the DC bias impact on the capacitance value. See ceramic capacitor manufacturer data sheets.
8. Digital inputs undershoot < - 0.30 V to ground, Digital inputs overshoot < 0.30 V to V_{bat}.
